

COGAN'S NEW STRUCTURAL STEEL CANTILEVER RACKING SYSTEM

SOPHISTICATED DESIGN AND EASY STORAGE

Cogan has been manufacturing quality wire and metal solutions in North America for over ten decades. Our new structural steel cantilever racking system is another prime example of our proven track record for bringing vision, innovation and functionality to the material handling industry. Ideal for storing short, long or awkwardly shaped items – from steel sheets and tubing to dry wall and lumber – our cantilever racks are easy to install and are space efficient, optimizing the productivity and profitability of your work environment.

Cogan cantilever racking is designed for outstanding durability. Built for the toughest applications, all connectors use high strength structural grade bolts for extra sturdiness. Also, the structural steel components are painted with a powder-coat finish for superior protection from the elements. Every order is custom-engineered to meet your specific requirements, making Cogan cantilever racking the most intelligently designed system on the market. Bolt holes are punched in four inch center holes the full height of the column, with column sizes available up to 24 feet high. With innovative design like this, Cogan cantilever racking can withstand up to 20,000 pounds of weight per level and is the perfect storage solution for even your heaviest loads. Unobstructed front access speeds up loading and unloading, increasing the efficiency of your work space. No matter what your warehouse needs might be, Cogan cantilever racks are built to meet the rigorous demands of industrial storage.

At Cogan, we're always evolving, always looking for new ways to improve and expand our product line to better meet your growing needs. Our latest product reflects the same commitment to excellence and to customer satisfaction on which we have built our reputation. Using our advanced manufacturing techniques and know-how, Cogan cantilever racking responds the most stringent industry requirements. Our new product officially launches on April 15, 2009 and we are currently accepting quote requests for May deliveries. With Cogan you get more than you pay for – more value, more reliability, and more support. Faster. Leaner. Better.
